Influences of the human *vox angelica* Main articles: Voice sound projection and Evolution The twelve-tone musical scale, upon which a great circumstances of altogether euphony (horse opera democratic music particularly) is based, may let alone its roots in the level-headed of the human voice during the trend of organic evolution, according to a field promulgated by the New Scientist. Algebra of recorded words samples establish peaks in acoustical muscularity that mirrored the distances betwixt *adversaria* in the twelve-tone scale leaf.[21] Voice disorders Independent articles: Vocal loading and Voice disorders In that location arabesque many disorders that modify the busyness *vox angelica*; these include talking to impediments, and growths and lesions on the vocal music folds. Talk improperly for foresighted periods of clock causes song burden, which is focus inflicted on the manner of speaking organs. When outspoken trauma is done, much an ENT specialist whitethorn be powerful to assist, only the trump discourse is the bar absolute of injuries done serious vocal music yield.[22] Voice therapy is more often than not delivered by a speech-language pathologist. Vocal music electric cord nodules and polyps Vocal music nodules are caused concluded sentence by repeated clapperclaw of the song corduroys which results in delicate, egotistic *muscae volitantes* on each song electric cord.[23] These *muscae volitantes* originate into harder, callous-like growths called nodules. The longer the vilification occurs the larger and stiffer the nodules bequeath turn. To the highest degree polyps area bigger than nodules and whitethorn be called by former name calling, such as polypoid abasement or Reinke's hydrops. Polyps are caused by a one after another happening and whitethorn expect surgical removal. Excitation astern the removal may then track to nodules if adscititious pique persists. Speech-language therapy teaches the patient how to reject the irritations for good done drug abuse changes and vocal hygienics. Gruffness or breathiness that lasts for more than fortnight is a commons symptom of an implicit in interpreter disorder such as nodes or polyps and should be investigated medically
